

**INGENIERIA DE AGUAS DEL SUR, S.L.U.** considers that Quality and Environment are essential and fundamental elements within the management of its activity of carrying out water treatment engineering projects.

Currently, society, consumers and consequently clients continue to raise their expectations, and therefore their requirements, in terms of values, products and services demanded, which forces companies to optimize costs and, above all, to offer a guarantee of quality for the products and services they provide.

Similarly, environmental protection occupies a prominent place within the activities carried out by **INGENIERIA DE AGUAS DEL SUR, S.L.U.**, being them developed with the utmost respect for the protection of the environment and pollution prevention, acknowledging our responsibilities and continually seeking new strategies to reduce the environmental impacts of our jobs.

Within this context, we have established, as a frame of reference to carry forward our commitment to Quality and our commitment to the Environment, the following requirements:

- Optimize internal management and goals, adapting the organization to the achievement of the General objectives of Quality and Environment established and reviewed periodically by the management; the policy is the frame of reference for the definition of objectives.
- Maintain and continuously improve a Management System that allows an adequate communication, training and awareness of all the employees of **INGENIERIA DE AGUAS DEL SUR, S.L.U.**, and that offers confidence to both actual and potential clients, strengthening our image in the market and guaranteeing the satisfaction of our customers.
- Comply, at all times, with legal, normative and contractual requirements (including environmental ones), expectations and needs of clients and stakeholders, internal requirements and others signed by **INGENIERIA DE AGUAS DEL SUR, S.L.U.**
- Continuously improve Quality, enhancing the capabilities of the employees in **INGENIERIA DE AGUAS DEL SUR, S.L.U.**, with an eminently preventive and environment protection approach.
- Focus Environmental Management in order to control and reduce the consumption of water and energy and to an adequate management of waste. It must be in accordance with the significant environmental aspects.
- Keep the adequate environmental and security information of our products and services available to consumers.
- Periodically audit and review the system to check its implementation and effectiveness.

Ultimately, to acquire a commitment to continuous improvement for our business management, for which **INGENIERIA DE AGUAS DEL SUR, S.L.U.** has set the goal of designing and implementing a Quality and Environmental Management System in accordance with ISO 9001 and ISO 14001 standards.
